

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the Application:

Listing of Claims:

1. (Currently Amended) A mounting structure for an electronic device adapted for use in a vehicle interior, comprising:
 - a base adapted to be coupled to a structure of the vehicle interior and having an aperture therein;
 - a cover coupled to the base;
 - the electronic device configured to fit within the aperture and having at least one projection extending between the base and the cover;
 - so that ~~at least one~~ the projection ~~extending from the electronic device~~ is clamped between the base and the cover when the electronic device is positioned in the aperture and the cover is coupled to the base.
2. (Original) The mounting structure of Claim 1 wherein the base includes a platform portion having at least one mounting surface formed thereon so that the projection overlays the mounting surface when the electronic device is assembled on the base.
3. (Original) The mounting structure of Claim 1 wherein the cover further comprises a clamping member configured to retain the electronic device on the base.
4. (Original) The mounting structure of Claim 3 wherein the clamping member comprises an edge of the cover.
5. (Original) The mounting structure of Claim 1 wherein the cover is coupled to the base by fasteners.
6. (Original) The mounting structure of Claim 5 wherein a body portion of the electronic device is substantially free of engagement with the fasteners.

7. (Currently Amended) The mounting structure of Claim 1 wherein an underside of the body portion of the electronic device is adapted to be substantially free of contact with any component within the vehicle interior.

8. (Original) The mounting structure of Claim 1 wherein the mounting surface is configured to position the electronic device at an angle relative to the base.

9. (Currently Amended) A method of assembling an electronic device having at least one projection for mounting in a vehicle interior, comprising:

~~coupling a base to an portion of the vehicle interior, the~~ providing a base having an aperture and a platform portion ~~configured for placement of the projection thereon;~~
and

mounting the electronic device on the base by positioning a body portion of the electronic device within the aperture and overlaying the projection on the platform portion;

coupling a cover member to the base so that the projection is captured between the platform portion and the cover member and a surface of the electronic device body portion is substantially free of contact with the base and the housing cover member; and
coupling the base to the vehicle interior.

10. (Currently Amended) The method of Claim 9, wherein the platform portion ~~further defines an~~ substantially surrounds the aperture ~~for positioning the electronic device therein.~~

11. (Original) The method of Claim 9 wherein the platform portion further comprises at least one mounting surface adjacent the aperture and configured to engage the projection.

12. (Original) The method of Claim 9 wherein the cover member further comprises an edge configured to sandwich the projection between the cover and the mounting surface when the cover member is coupled to the base.

13. (Original) The method of Claim 11 wherein the mounting surface comprises a post configured to engage an opening in the projection.

14. (Currently Amended) The method of Claim 9 wherein the electronic device is a DVD device ~~and the surface is an underside of the DVD device.~~

15. (Currently Amended) ~~A system for mounting an electronic device in a vehicle interior~~ An apparatus, comprising:

a base member having an aperture and ~~configured to receive the electronic device therein~~; at least one mounting surface ~~provided on the base member~~ adjacent the aperture;

an electronic device having a body portion positioned within the aperture;

a mounting structure extending from a the body portion of the electronic device and configured to interface with the mounting surface; and

a cover having a clamping portion configured to secure the mounting structure between the mounting surface and the cover when the cover is coupled to the base member so that the body portion is substantially free of contact with the cover and the base member.

16. (Currently Amended) The system of Claim 15 wherein at least one of the base member and the cover are adapted to be mounted to a component in a vehicle interior ~~the body portion of the electronic device has a bottom surface that is substantially free of contact with the base member and the cover.~~

17. (Original) The system of Claim 15 wherein mounting surface at least partially surrounds the aperture.

18. (Original) The system of Claim 15 wherein the mounting surface includes a projection configured to engage an opening in the mounting structure when the electronic device is positioned in the aperture.

19. (Original) The system of Claim 15 wherein the electronic device is a DVD device.

20. (Original) The system of Claim 15 wherein the cover further comprises at least one connection device for coupling the cover and the base member and is positioned so that the clamping portion provides a clamping force on the mounting structure when the cover is coupled to the base.

21. (Currently Amended) The system of Claim 15 further comprising a housing having a first attachment structure for coupling to the base member and a second attachment structure adapted to couple to a structure within ~~the~~ a vehicle interior.

22. (Original) The system of Claim 21 wherein the structure is an overhead panel in the vehicle interior.

23. (Original) The system of Claim 15 wherein the mounting surfaces are adapted to restrain movement of the electronic device in a direction generally parallel to a plane of the electronic device.

24. (Currently Amended) The system of Claim 15 wherein the cover is coupled to the base member by fasteners and the body portion of the electronic device is substantially free of contact with the fasteners.

25. (Original) The system of Claim 15 wherein the mounting surface is configured to orient the electronic device at an angle relative to the base member.
